

# DecoDemp Acoustics

## Why we are here and what we do

### DECODEMP- ABOUT

Our beautiful acoustic panels for walls and screen walls are designed to combine aesthetics and functionality, as they provide both a stunning wall decoration and room partitions with high acoustic performance. At DecoDemp, we prioritize quality, with a preference for customized solutions where acoustic comfort is a top priority.

### OUR ALUMINIUM PROFILES

Our GreenAlu profiles are made from recycled aluminum. The aluminum is melted using green energy from water or wind power. This makes our profiles one of the most sustainable choices on the market, with a CO2 footprint only of 2.04 kg per kg of aluminum. Our aluminum comes with an EPD (environmental product declaration) verified by Ramboll in accordance to ISO 14025 and EN 15804:2012 + A2:2019.

### ENVIRONMENT AND RECYCLING

We offer all customers the option to have us recycle old panels and screen walls that we repurchase, which we either upcycle, donate to charity. In the separation of products, the acoustic panel is used for recycling, and all the fabric material is used in our own eco-system for new acoustic panels. The aluminum is sent for recycling, and long profiles typically become part of the production of new panels again.

### CUSTOMIZED SOLUTIONS

We understand that every room is unique, and therefore, we offer the customization of our panels to individual dimensions. This ensures that our acoustic solutions fit perfectly into the specific room, whether it is in offices, schools, institutions, a conference rooms, or something entirely different. We are dedicated to delivering the best possible acoustic experience and ensuring that our product meet your precise requirements, for both sound and design.

DecoDemp delivers uncompromising acoustics and quality. We have been creating excellent acoustic environments since 1996.
